Application/Control Number: 10/581,677

Art Unit: 2837

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: fig 11 does not show 18b and 11b. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next

Page 2

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Office action. The objection to the drawings will not be held in abeyance.

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1,3-14,16-20,22-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over 5179307 in view of 4475068 both cited by applicant . 5179307 discloses a switched dc rotating machine (col 2 , lines 17-20) comprising a stator (40), rotor (10) and switching means (fig 5, q3-q6) one of said stator and rotor comprising an excitation winding (fig 2 , 50,52) having a first and second input (fig 5), excitation winding being adapted when energized to cause magnetization of an even plurality of poles associated with excitation winding (fig 1 ,2) , the switching means

Application/Control Number: 10/581,677 Page 3

Art Unit: 2837

being adapted to be associated with dc voltage source (fig 5, B1,B2) to switch the out thereof for the first and second input of excitation winding (fig 5), the dc voltage source providing a low voltage output, a high voltage output and intermediate voltage output having an electrical potential intermediate the electrical potentials of high voltage output and low voltage out put, wherein in use the intermediate voltage output is continuously connected to first input of excitation winding and second input is switched in a cyclic operation by switching means between connection with high voltage output and low voltage output (col 3 lines 64-col 4 line 15, fig 5). 5179307 lacks disclosing segments of time when second input is disconnected from either of low voltage or high voltage outputs. 4475068 disclose segments of time when second input is disconnected from either low voltage or high voltage outputs see abstract.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen Masih whose telephone number is 571-272-2068. The examiner can normally be reached on m-f 8.30-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Walter Benson can be reached on 571-272-2227. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
